

ScientiQ Staffing:

Shifting boundaries, conquering challenges while working on your future. Reaching the top! Having the most challenging jobs and providing professional guidance, ScientiQ Staffing is the exceptional secondment agency for specialists in the laboratory branch. We support not only Dutch but also specialists from the Middle- and Eastern Europe. Offering you the possibility to prove your worth and to gain experience also in a foreign country! As we take care of all that comes with integration (applying for a social security number, health insurance, accommodation, professional courses, etc.) you will be able to focus on your most important challenge: managing a successful career!

ScientiQ Academy:

ScientiQ believes in development and knowledge sharing to improve and innovate your work and career. For this purpose we have the "ScientiQ Academy".

We provide our employees several trainings and courses in the field of e.g. GC, MS, HPLC and PCR if necessary. Besides that we work on your personal development with social trainings, language courses and career coaching.

ScientiQ Academy: project "Dutchlab Experience":

During your studies you will gain a lot of theoretical knowledge which is very useful for your career. With the project: "Dutchlab Experience" we help you to gain the essential work experience within commercial laboratories in The Netherlands to become highly competitive even on international labour markets. You will learn about these labs, the way they work and will get a lot chance to work with several laboratory techniques. Also you can add international work experience to your CV which is definitely advantageous while applying for a job anywhere in the EU.

The work and the companies:

This will not be a normal internship with a thesis, a project and a conclusion. It will be about real daily work routine. You will learn what you can expect, how the equipment works and how the companies are organized. This means that you do your work like their regular employees. Of course there is more time to guide you and to let you get used to the environment and equipment. At the moment we cooperate with big national and international companies like *Alcontrol*, *I.F.F.*, *Shell*, *Aqualab Zuid* and *Environmental & Food Laboratory Zeeuwsch-Vlaanderen* for this project.

What will be arranged?

The internships will start around April and October and they will last for 6 months. In this project we work together with our Hungarian partner "Match&Select Hungary". Together with them we arrange the total project. You will get an English language and a Dutch cultural course organized by Match&Select before you go, so you can manage yourself better in The Netherlands. We arrange your accommodation and the transport to your work every day. We will also arrange the flight tickets from Budapest to The Netherlands and back. To cover the rest of your expenses in The Netherlands you will receive an internship cost coverage of €. 500,- per month.

What do we ask?

The suitable candidates for this program:

- have a bachelor degree or higher in directions as *(analytical)chemistry or (micro)biology*.
- speak and write proper English and very motivated to start with this project.
- eager to learn and like challenges.
- available for the full period.

If you are selected for the program you are required to put effort and motivation in the given Dutch course too. If your motivation seems insufficient during the Dutch course, we can still decide to cancel your internship.

Interested?

Send your Match&Select format CV in English to Match&Select Kft.
